

Step 1: Read the statment Problem

CASE STUDY:

BrightTV (Viewership Analytics) BrightTV 's CEO has an objective to grow the company's subscription base for this financial year. He has approached you to provide insights that would assist CVM (Customer Value Management) team in meeting this year's objective.

The dataset attached contains information on the user profiles and viewer transactions for BrightTV. Please prepare a 20 min presentation covering the following topics:

- Provide insights on user and usage trends of BrightTV.
- What type of factors influence consumption?
- What content would you recommend to increase consumption on the days with low consumption?
- What type of initiatives would you recommend to further grow BrightTV 's User base. Notes:
- Times and dates in the dataset are supplied in UTC and should be converted to SA time.
- Consumption is split per session, i.e. for every session a subscriber has, there will be 1 record.
- Any additional data that may assist in the presentation is welcomed Enjoy

Step 2: Ask Data Driven Questions

Step 3: Analysis Planning

Data Inspection: Checking what Data is available to solve the Business Problem that we have

Email - if the subscriber has an email, we can then send them campaigns via email increases the subscriber view

Province - we will use for province to do regional analysis

Duration 2 - using the duration i can analyze which content has the highest duration as compared to other shows

Gender - can be used to classify the subscribers

Age - can be used to classify the group age for subscribers

RecordDate2 - I will the datetime, date functions to extract the day name, month, week ,and time of date in which people are watching

Race - We can classify the race based on subscribers

UserID - can be used to on the demographic table to join with the viewership table

Channel2 - Name of show to check the top and buttom shows to track the highest and lowest viewership

Demographic Data

Viewership Data

Bright TV
Analysis

Step 4: Data Exploration Analysis

To be completed on DataBricks

Data Exploration Analysis is to understand the relationship between the User Profile and Viewership dataset
